Magnetic Switches

Magnetic switches are used for monitoring the position of automation components. They detect the approach of a magnet without contact and, above a certain switching threshold, enable their output.

Function description

Magnetic switches react to magnetic fields. The resistors in the sensor consist of several ferromagnetic and non-magnetic layers. Two shielded and two non-shielded resistors are combined in a bridge circuit, which produces a strong signal proportional to the magnetic field when one is present. Above a threshold value, an output signal is switched via a comparator, and the sensor reacts.

Your advantages and benefits

Installation in sensor slot

for space-saving, simple and fast assembly

Version with LED display (MMS 22)

for checking the switching position directly at the sensor

Version with connector

for easy, rapid replacement of the extension cable

Application example

Area of application

For use in the monitoring of gripping and rotary modules, linear modules and robot accessories. Magnetic switches from SCHUNK detect metals without contact or wear and are resistant to vibration, dust and humidity. Magnetic switches are fitted in slots and therefore do not form any additional interfering contours.

1 MMS electronic Magnetic Switches fitted in C-slot of the Mini-Slide

2 FST 16 – 60 Mini-Slides

General information

Material

Sensor housing: PA in the MMS 22, aluminum in the MMS 30
Cable: with PUR sheath

Mounting

Clamps in the sensor slot

Protection class in accordance with DIN 40050

IP 67 when connected

Voltage

10 - 30 V DC at < 10 % residual ripple

Switching method

PNP switching / NPN switching

Warranty

24 months

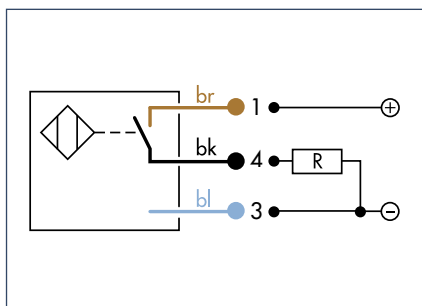

Notes

SCHUNK gripping, rotary and linear modules and robot accessory components that are to be monitored with electromagnetic slot-fitted switches can generally only be reliably monitored with the appropriate electromagnetic switches from SCHUNK. Sensors and products are matched on the basis of the relationships between the parameters type and field strength of the magnet, distance, wall thickness and wall material of the magnet and the sensor, and the orientation and sensitivity of the sensor itself.

For this reason, sensors from other manufacturers employed in SCHUNK products rarely give satisfactory switching results.

Adjustable housing for proximity switches

Description	NHG 5	NHG 8
ID	9646006	9646007
Suitable for types	M5 x 0.5 x 25	M8 x 1 x 32
a	27	34.5
b	M8 x 1	M10 x 1
c	8.5	8.5
d	10	12
e	4	2.8
f	SW 13	SW 14

Advantages of the NHG

- Setting only has to be carried out once
- Faulty switches can be replaced quickly
- Corrosion-free material
- Setting does not have to be changed if proximity switch is replaced
- Switches are protected against mechanical influences

Sensor tester

The sensor tester enables the rapid testing and adjustment of inductive sensors, magnetic switches and reed contacts. The necessary power is supplied by a 9 V compound battery.

Function description

The sensor is connected to the M8 - M12 or terminal connection of the sensor tester and the ON button pressed. The sensor status is displayed visually by LEDs and output acoustically via a signal buzzer.

Your advantages and benefits

Visual and acoustic signal

for simple function checks and adjustment

For 2 and 3-wire DC technology

enabling the connection of reed contacts, capacitive and inductive sensors

Tests possible without dismantling sensors

for short maintenance times

Connections for M8 and M12 or open cable ends possible

suitable for all SCHUNK sensors

PNP and NPN sensors can be tested

Operating voltage with 9 V compound battery

for mobile use

Automatic cut-off function

for an extended battery life

Application example**Area of application**

Sensor testing and adjustment of the switching point
(sensor calibration)

1 SST Sensor Tester

3 Metal plate

2 IN 80 Inductive Proximity Switch

General information**Scope of delivery**

Sensor tester incl. assembly and operating manual with manufacturer's declaration,
9 V compound battery

Notes

Please note that only one SST input (M8 or M12 or cable terminal input) can be
used at one time.

If the toggle switch is towards the sticker (nameplate), PNP is selected, if not, NPN.

Technical data

Description	ID	SST
Battery		9 V DC (battery type LR 61)

Sensor Distributor

For connecting all SCHUNK sensors and sensor systems (IN/INK/MMS, etc.). In the versions 2 (V2), 4 (V4) and 8 (V8).

Function description

Distributors collect incoming signals and forward them in a single cable. This eliminates with unnecessary cables. The switching state of the connected components can be checked by the LEDs integrated in the distributor.

Your advantages and benefits

Status and switching display via LED
for directly checking the switching state

One feeder cable
making it ideal for feeding through signals

Sturdy PA housing
for a long life and resistance to many chemicals

Application example

Area of application

Sensor distributors from SCHUNK are universal and resistant to vibration, dust and humidity. They are therefore suitable for use in both clean and dirty environments.

1 V 8 Sensor Distributor

2 SRU 63 Flat Rotary Actuator

3 PHE Stroke Module

4 PGN 2-Finger Parallel Gripper
with workpiece-specific Gripper
Fingers

General information

Materials

Housing: PA 6 GF 30, black

Cable: PUR sheathing

Mounting

with screws

Protection class to DIN 40050

IP 67 when connected

Scope of delivery

Complete incl. sealing plugs for sealing unused connections, 1 set of labels

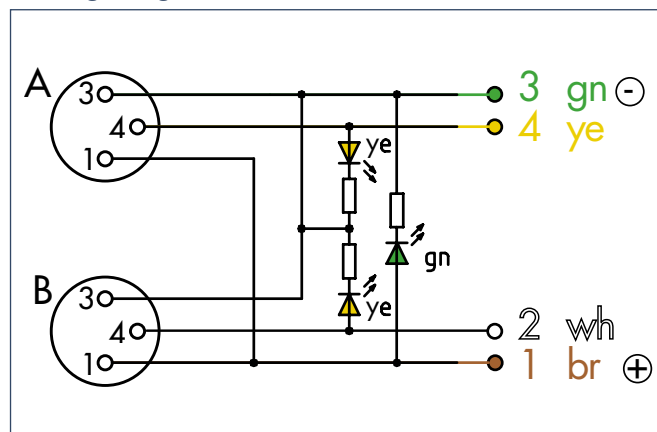

Warranty

24 months

FPS Flexible Position Sensor

The optional FPS sensor system measures the position of gripper jaws. It then indicates in which of the five freely teachable zones the jaws currently are. Alternatively, the jaw position can be read out via the "FPS Controller" software (FPS-F5/ F5T only).

Function description

A permanent magnet that moves with the base jaw provides the FPS sensor with its magnetic field. The strength of this permeation changes depends on the distance of the magnet from the sensor. This variable is recorded, evaluated and output by the FPS electronic processor.

Your advantages and benefits

Simplest operation

with just two buttons, or with the machine control system using free control lines

Simple start-up

as the customer can set all positions during the teaching operation

Five digital outputs

for greater economy as compared to individual sensors

Small distance between two switching points, adjustable

Resistant to contamination

through non-ferromagnetic materials

Function and switching status display

via LEDs on the electronic processor

Conforms to CE

for safety and long life during permanent operation

Digital technology

for resistance to interference

Additional advantages of the FPS-F5 and F5 T

- Measuring functionality
- Communication and remote maintenance via RS-232 protocol
- Position programming and readout of switching points
- Monitoring of temperature and input voltage
- Visualization via PC possible
- Data logging
- Calibration of system to gripper stroke
- Intelligent access authorization
- Adaptation to new product during the process

Application example

Area of application

Position sensing of gripper jaws up to a stroke of approx. 30 mm in environments that may be clean or dirty, but are free from steel chips.

General information

Resolution

The resolution is the minimum stroke difference that is required in order to reliably distinguish between two signals. Used in conjunction with most SCHUNK grippers, the FPS system achieves a resolution of 1 – 3 % of a jaw stroke. However, in some grippers a resolution of only 10 % is achieved due to the nature of the design. More precise resolutions may be reached, however, with the use of special solutions. Please contact us regarding the resolution/accuracy of the FPS system.

Connector for the electronic processor (enclosed)

12-pin circular connector (Binder type series 723, waterproof) suitable for connection cables with a diameter of 6 to 8 mm, recommended conductor cross-section 0.14 mm² (max. 0.25 mm²)

Ambient conditions

Use within the range of strong magnetic fields is not recommended. Neither the FPS sensor nor the FPS magnet may come into contact with ferromagnetic dust, chips or other substances.

Display

Five colored LEDs

Range of measurement

5 to 30 mm with SCHUNK magnet (NdFeB magnet cut to size, dimensions 6 x 25 mm x L) with various lengths L depending on the part of the range of measurement

Material

Processor: Plastic PA 6

Cable: PU, resistant to coolants/lubricants

Warranty

24 months

Notes

All data were determined on the basis of SCHUNK attachments and specifications. Please consult us regarding use of the sensor with modules from other manufacturers.

FPS sensors

Either the FPS-S13 or the FPS-SM8 sensor is required, depending on the type of gripper. Each sensor is connected to its own FPS-A5/F5/F5T processor.

Description		FPS-S 13	FPS-S M8

KV 1	0301599	1.0 m

FPS-A5/FPS-F5 Processor

Measurement of the gripper stroke using sensors, assignment to the positions/zones "Open", "Intermediate position 1,2,3" or "Closed", and output of a position signal. A maximum of four switching points/five zones are freely programmable. FPS-F5 additionally with RS-232 interface, remote maintenance, measuring functionality, system calibration to the millimeter, temperature and voltage monitoring.

FPS-F5T processor

Measurement of the gripper stroke using sensors, comparison with target value, output of tolerance information "Within tolerance", "Above tolerance" or "Below tolerance", plus "Open" and "Closed". Otherwise, like the FPS-F5.

Software for FPS-F5/F5 T

The free FPS Controller software allows the user to monitor the FPS processor via an RS-232 interface. As a result, the FPS system can be calibrated to stroke measurement, the position can be read out and the FPS processor can be programmed. The FPS software also provides access to all auxiliary functions (see above).

Possible connection methods

Analog Position Sensor System

Mechanical, analog system comprising sensor and processor for accurately recording the position of gripper jaws.

Function description

The high-resolution APS-M1S sensor is actuated by an inclined surface (mounting kit), which is attached to the gripper base jaw. The changes in position of the sensor are recorded, amplified, prepared and made available to an analog output by the APS-M1E processor.

Your advantages and benefits

Position output

as voltage (V) or current (mA)

Precise measuring system

also for long strokes

Compact design

for space-saving installation in any control cabinet

Conforms to CE

for absolute safety and long life during permanent operation

Application example

Area of application

for the precise measurement of the gripper jaw position in clean environments

1 APS-M1E Processor

2 APS-K7 Extension Cable

3 APS-M1S Sensor

4 PZN-plus 100
3-Finger Centric Gripper

General information

Warranty

24 months

Ordering

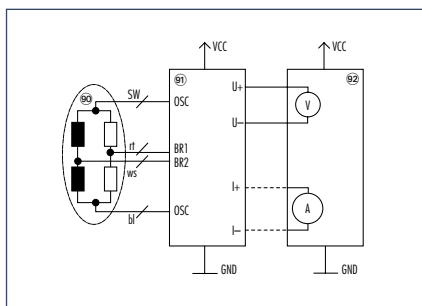

The sensor and processor must be ordered as individual items.

Notes

The accuracy of the complete system as stated here is available from a stroke per jaw of 7 mm. The entire range of the sensor cannot be exploited with smaller strokes. The relative accuracy (ratio of repeat accuracy to jaw stroke) decreases, the absolute repeat accuracy (in mm) is the same as for a gripper with a 7 mm stroke, i.e. 0.021 mm.

Wiring diagram

- ⑨⑩ APS-M1S Sensor
- ⑨① APS-M1E Electronic Processor
- ⑨② Automation device, e.g. S7-300

ⓘ When using an APS system, a mounting kit, APS sensor (APS-M1S) and processor (APS-M1E) are required for each gripper. The mounting kits can be found with the grippers. Mounting kits for other components/grippers are available on request. The sensor has a 3 m molded cable.

Force Measuring System

The FMS force measuring system is used for measuring the gripping forces during the gripping process. This opens up numerous new possibilities both during start-up and in the production process.

Function description

The FMS intermediate jaws are screwed on between the gripper base jaw and the top jaw, which comes in contact with the workpiece. Gripping forces on the top jaw result in a flow of force through the FMS intermediate jaw. Intelligently arranged strain gauges inside the intermediate jaw react to the resulting deformation. The FMS processor detects the change in the strain gauges and emits an analog signal indicating the force.

Your advantages and benefits

Simplest handling

via a control line that is directly connected to an SPC

Easy-to-perform measurement

of the actual, active gripping force

Result output via analog voltage value

Simple, linear relationship

between output voltage and gripping force

Simple zero balancing

with button or via control line

Integrated LCD

for visual monitoring

Easy assembly

Dirt-proof and waterproof

also for use in extreme ambient conditions.

Application example

1 PGN-plus 100 AS
2-Finger Parallel Gripper

2 FMS-ZBA Intermediate Jaw
with Sensor (active)

3 FMS-ZBP Intermediate Jaw
without Sensor (passive)

4 Workpiece-specific Gripper Finger

5 Electronic Processor

General information

For all PGN-plus and PZN-plus grippers

as well as for all grippers with identical finger connection diagram, for other grippers on request (remember to ask about the delivery time!)

Conforms to CE

for absolute safety and long life during permanent operation

Warranty

24 months

Area of application

Gripping force control

By sending control signals to the proportional valve that supplies the gripper, the PLC can influence the automatically measured gripping force.

Teaching robots

When gripping firmly fixed workpieces, the teaching of robots is simple and precise. Symmetrical gripping only takes place if the left- and right-hand gripper jaws apply the same force — thereby protecting the gripper and the robot.

Static grip force monitoring

- Monitoring the grip force as the jaws close prevents the workpiece from being dropped when movement initiates.
- Overload protection by monitoring the max. permitted force, which can be triggered e.g. by an inadvertent increase in pressure, by off-center gripping or the incorrect positioning of the workpiece.
- Preventive maintenance by replacing grippers in good time when there is a decline in the gripping force. This avoids unexpected manufacturing down-times.

Dynamic grip force monitoring

- The effect of acceleration forces on the gripper jaws can be recorded and the motion sequence modified if necessary.
- Component monitoring during highly dynamic movements.

Measuring and teaching processes

- Dimensional checking of the gripped component on the basis of an inserted reference component. If the component to be measured differs by more than ± 0.05 mm from the reference component, teaching can take place. If the difference is smaller, the precise dimensions can be measured accurately even to within ± 0.002 mm.
- Gauging the weight of the component by measuring the force due to weight of the component on the gripper fingers.

Notes

The FMS force measuring system allows you to measure forces that act on the base jaw in the direction of the jaw movement. Up to three active (equipped with sensors) FMS-ZBA intermediate jaws are required for this purpose, depending on the application. The remaining base jaws are equipped with FMS-ZBP passive intermediate jaws (without sensors). Each FMS-ZBA active intermediate jaw requires an FMS-A1 electronic processor for evaluation, and an FMS-AK connection cable for connecting the electronic processor to an PLC or a control cabinet.

FMS Processor

Each FMS-ZBA active intermediate jaw requires an electronic processor.

The FMS-A1 processor is required for intermediate jaw sizes up to 125, the FMS-A2 processor from size 160.

The electronic processor is used to prepare, display and forward the measurement results. It is equipped with a housing connector and socket for connecting the force measuring jaw and the connection cable.

Description		FMS-A1	FMS-A2
	ID	0301810	0301811
Measuring accuracy	[%]	3.0	3.0
Output signal		- 5VDC.. +5VDC	- 5VDC.. +5VDC
Type of voltage		DC	DC
Nominal voltage	[V]	24.0	24.0
Min. voltage	[V]	18.0	18.0
Max. voltage	[V]	30.0	30.0
Nominal current	[A]	0.0045	0.0045
IP rating		67	67
Weight	[kg]	63.0	63.0

① The output voltage is linear to the forces occurring at the gripper fingers.

The bandwidth of the output signal is not fully exploited by every active intermediate jaw.

Zero balancing must be performed prior to measurement.

The limit class A according to EN 61326 is complied with.

The test to EN 61000-4-2, EN 61000-4-3, EN 61000-4-4 and EN 61000-4-6 was passed in conformity with EN 61326.

Main views**FMS-AK connection cable**

The FMS-AK connection cable is used for connecting the electronic processor to a control cabinet or an PLC. A cable bushing is fitted on the side of the electronic processor, the other side is open.

Description	ID	Length
FMS-AK 5	0301821	5.0 m
FMS-AK 10	0301822	10.0 m
FMS-AK 20	0301823	20.0 m

Force measuring jaws

The force measuring jaw is situated between the gripper base jaw and the top jaw. The gripping force is conducted through it. Active intermediate jaws measure these forces and transfer the measured value to the electronic processor. Active intermediate jaws are equipped with a 30 cm cable and a cable connector. Passive intermediate jaws act solely as a bridge for the forces.

Definitions

- ① The range of measurement is the range in which the overall system has an accuracy of $< 3\%$.
The overload range is the range in which the overall system has an accuracy of $> 3\%$. At the end of the overload range there is a risk of mechanical destruction of the intermediate jaw.

2 SWV pivot screw connection

3 PGN-plus 2-Finger Parallel Gripper
with workpiece-specific gripper
fingers

Pressure maintenance valve and fitting

Your advantages and benefits

Suitable for all SCHUNK gripper, rotary and linear modules and robot accessories

Everything from a single source

The SDV-P pressure maintenance valve protects against a loss of pressure

Version as plug-in connection (SCHUNK fittings)

Pressure maintenance valve

In the event of a loss of pressure, the pressure maintenance valve prevents the air from escaping out of the gripper. This prevents a loss in clamping force, and the workpieces remain securely clamped in the gripper jaws. Especially suitable for grippers that cannot be equipped with mechanical pressure maintenance.

Function

Two check valves connected in parallel, which automatically open the return channel and close the pressure line on a loss of pressure.
